Get the Facts on Sarcoidosis

Sarcoidosis is a disease that involves the immune system and leads to inflammation in the body. People with sarcoidosis develop lumps, called granulomas, in the affected part(s) of their body. If there are too many granulomas in a particular organ, they can impact the way the organ works and may cause symptoms. The exact cause of sarcoidosis is unknown; however, research suggests that it is likely a combination of genetic and environmental factors.

Approximately 200,000 people in the United States have sarcoidosis, and there are a number of resources available to everyone!

**Goals of Sarcoidosis Treatment**

It is important to understand the goals of your individualized sarcoidosis treatment plan. Identifying and keeping track of treatment goals is a key first step. Individuals should discuss their treatment goals with their doctor. Some sarcoidosis treatment goals may include:

- Managing symptoms
- Preventing or controlling organ damage
- Improving quality of life

**Self-Care and Sarcoidosis**

Coping with sarcoidosis can be overwhelming at times. Sometimes it can make the individual feel sad, angry, or isolated. Practicing proper self-care can help and is important for both your mental and physical well-being. Some ideas for self-care may include:

- Staying connected with friends/family
- Engaging in activities you enjoy
- Seeking humorous and upbeat entertainment
- Setting aside leisure time (e.g., reading a book, gardening, listening to a podcast)
- Investing in a hobby
- Seeking quiet through meditation and/or prayer
- Eating healthy meals
- Working with your healthcare provider to develop an exercise program that’s right for you

**Treating Sarcoidosis**

There is no cure for sarcoidosis, but many people with sarcoidosis do not require treatment and sarcoidosis may go away. In other cases, symptoms remain and treatment may be required.

Treatment for sarcoidosis is different for every person. If sarcoidosis affects more than one organ, a team of doctors specializing in treating different parts of the body may work together to develop a treatment plan. Individuals should talk to their doctor(s) to determine which treatment(s) may be right for them!

Our greatest glory is not in never falling, but in rising every time we fall. Confucious
